Session 3 slides

Session 3 slides

Governance and adoption

Session 3 | Level 3

Recall the pathway

Session 1: screen and accountability

Session 2: verify outputs and prompts

Session 3: organizational decisions and pilots

Individual convenience vs policy

Situation	Risk
Free tool for meeting notes	May violate data policy
Approved tool for public text	May be green with checks
Auto-approving assistance	Requires governance

Policy protects people, not only IT.

Green / amber / red at org level

- **Green:** Approved use case, approved tool, verification built in
- **Amber:** Pilot with charter, limited data, executive sponsor
- **Red:** No framework, sensitive data, auto-decisions on rights

Decision options today

1. **No AI** until framework exists
2. **More evidence** and real consultation
3. **Limited pilot** for leadership review

No live data in the classroom exercise.

Safeguarding and protection

- Child protection and GBV-related data: default **red** in unapproved tools
- Disclosures in training: pause, refer to org focal points, do not investigate in plenary
- PSEA reporting routes must be known before incidents
- See safeguarding module and data-responsibility checklist

Pilot charter (essentials)

- Task and non-AI baseline
- Owner and sponsor
- Permitted inputs and tool
- Consultation still required
- Success, failure, and subgroup checks
- Human approval and remedy
- Manual fallback and safe exit

Group decision block

Fictional brief: Partner AI platform for registration analytics.

30 minutes: choose option 1, 2, or 3 and draft charter headings.

Transparency card exercise

In pairs (15 minutes), draft one transparency card for the case-study AI use from the decision block.

See the template for the facilitation sequence.

Challenge block

15 minutes: another group provides one written challenge from one assigned perspective—frontline, manager or policy/privacy. Revise the decision and name the approval owner.

Consultation reminder

Classroom role play is **not** consultation with affected people.

Real pilots require real engagement per policy.

Post-assessment

Complete exit check after this session (different examples, same skills).

Action to work

One governance action:

- Ask leadership for AI guidance
- Propose a pilot charter for one low-risk task
- Join a data-responsibility working group

Thank you

Follow-up clinic in ~4 weeks: bring de-identified questions only.
