Facilitator delivery guide

Facilitator delivery guide

Learning materials only. This guide supports facilitators who deliver the kit for a hosting organization. It does not replace your organization's policies, safeguarding procedures, or legal counsel.

Each session stays **90 minutes** (clinic: 60 minutes; short activity: 15 minutes). Detailed timings are in each run sheet. Use the cut lists below if you run long. Never extend a session beyond its scheduled end.

Before you start

1. Complete the facilitator preparation checklist.
2. Send the sample invitation and agenda email at least five business days before Session 1.
3. Distribute the participant handbook and technology and accessibility checklist.
4. Confirm safeguarding focal points with the hosting organization (see escalation path below).
5. Open a facilitator reflection log for the series (one entry per session).

Safeguarding escalation path (all sessions)

If a participant shares **real** beneficiary data, a **disclosure of harm**, or **child protection or GBV-related** information:

Step	Facilitator action
1. Pause	Stop the exercise. Do not ask for more detail in plenary.
2. Protect	Ask co-host to remove identifying content from chat or recording per platform rules.
3. Refer	Direct the participant privately to the hosting organization's safeguarding, PSEA, or protection focal point. Use contacts named in your pre-session briefing.
4. Do not investigate	You are not a counsellor or investigator. Do not promise outcomes.
5. Document	Notify the hosting organization's designated contact after the session per their policy. Do not copy sensitive content into your personal notes.

Primary sources: Core Humanitarian Standard (Commitment 5 on complaints and feedback); IASC Operational Guidance on Data Responsibility (2023) (do-no-harm and dignity). This guide is not legal advice.

Session 3 includes a safeguarding and protection module for teaching content.

Session 1: Responsible AI foundations (90 minutes)

Run sheet: session-01-foundations/run-sheet.md

Minute-by-minute cues

Time	Cue	Run sheet row
0:00	Welcome, ground rules, diagnostic	Opening
0:10	Teach AI types and accountability	Teach block
0:25	Worked example walk-through	Source check demo
0:45	Assign group roles; start Case 01	Group exercise
1:10	Debrief: one protection issue and G/A/R per group	Debrief
1:25	One-rule recall and action plan	Close

Expected participant responses

- Groups should identify **red** for the evacuation SMS case when they compare the draft to the bulletin.
- Protection issues named: wrong accessibility information, route errors, dropped negations in translation.
- Human control: local communications lead or equivalent approver, not the worksheet reviewer.

Common misconceptions

Misconception	Response
“AI is always dangerous”	Some green uses exist with checks. Proficiency is discrimination, not blanket refusal.
“Urgent tone means send”	Speed does not replace verification or approval authority.
“Deleting the chat fixes a data breach”	Retention and harm may already exist. Escalate per org policy.
“Our org has no AI policy”	Default to amber. Session 3 covers governance.

Difficult questions

- **“Can I use ChatGPT for my real caseload?”** Redirect to data-responsibility checklist and org approval. No tool endorsement in the classroom.

- **“What if leadership ignores red decisions?”** Name accountability gap; suggest pilot charter and policy ask in Session 3. Do not advise whistleblowing paths without org contact.
- **Participant shares real case data:** Follow safeguarding escalation path above.

Running long: cut list (Session 1)

Cut in this order until back on schedule:

1. Shorten teach block by 5 minutes (slides 5 to 6 only; skip optional predictive-AI example).
2. Reduce debrief to one poll question per group instead of two verbal reports.
3. Skip optional pair share at 1:15 if ahead buffer was used.
4. **Do not cut:** group exercise, contradiction identification, or safeguarding pause if triggered.

Session 2: Verified work by role (90 minutes)

Run sheet: session-02-verified-work/run-sheet.md

Minute-by-minute cues

Time	Cue	Run sheet row
0:00	Recall Session 1 rule	Recall
0:10	Teach structured prompts	Prompt teach
0:25	Pairs: prompt lab Part A	Pairs
0:48	Groups: source check Part B	Source check
1:10	Debrief: one correction and one approver	Debrief
1:25	Close and action plan	Close

Optional: Organizations with an approved tool may use the live-tool lab route instead of pre-supplied outputs. Default remains no-account.

Expected participant responses

- Prompt lab: improved prompts name task, audience, source, format, and missing-fact rule.
- Source check: 78% district prevalence marked **unsupported** or **contradicted** vs 31% in source.
- Managers may classify donor summarization as **amber** without org approval.

Common misconceptions

Misconception	Response
“I’ll fix the prompt and rerun at work”	Requires approved tool and data

Misconception	Response
	rules first.
“Rounding 31% to 30% is the main error”	Inventing 78% is a different failure mode.
“Pre-supplied AI output is unrealistic”	Many staff receive drafts from colleagues who used unapproved tools. Verification skill still applies.

Difficult questions

- **“Why not practice in the real tool?”** Default protects data and avoids account barriers. Live route is optional with synthetic data only.
- **“Verification takes too long”** Name which claims are consequential vs cosmetic. Session goal is selective verification, not line-by-line proofreading of everything.

Running long: cut list (Session 2)

1. Shorten prompt pair work by 5 minutes (provide one partially improved prompt as starter).
2. Use Case 2 only; skip Case 3 variant.
3. Debrief via chat poll: one correction, one approver, no verbal round.
4. **Do not cut:** source-check table, screen break, or live-tool safety briefing if using optional route.

Session 3: Governance and adoption (90 minutes)

Run sheet: session-03-governance/run-sheet.md

Safeguarding module: safeguarding-module.md (10 minutes within teach block).

Minute-by-minute cues

Time	Cue	Run sheet row
0:00	Recall pathway Sessions 1 to 2	Recall
0:10	Teach policy vs convenience; safeguarding module	Teach
0:25	Decision block: fictional brief	Decision block
0:55	Transparency card exercise in pairs (15 min)	Transparency card
1:10	Challenge block: one written	Challenge

Time	Cue	Run sheet row
	perspective (shortened)	
1:25	Post-assessment reminder; 30-day follow-up preview; close	Close

Timing note: The transparency card exercise uses 15 minutes permanently taken from the challenge block (was 30 minutes; now 15). The challenge block is the least essential activity shortened to keep the session at 90 minutes.

Expected participant responses

- Expect most groups to choose **option 2 or 3** (more evidence or a limited pilot).
- Charter drafts name consultation still required, stop thresholds, and manual fallback.
- Challenge block revises decision toward more consultation or narrower pilot scope.

Common misconceptions

Misconception	Response
“Classroom role play equals consultation”	Real pilots require real engagement. See AAP adaptation design note.
“Vendor promises mean green”	Vendor claims are not verification. Amber until framework exists.
“Uploading de-identified registration data is safe”	Re-identification risk and partner agreements still apply.

Difficult questions

- **“Our executive already signed the contract”** Name governance gap; charter and exit plan still required before operational upload.
- **“Indigenous data sovereignty”** Direct to org policy and Session 3 worksheet consultation row. Do not simulate nation-specific consent in plenary.

Running long: cut list (Session 3)

The standard plan already shortens the challenge block by 15 minutes for the transparency card exercise. If you still run long:

1. Shorten safeguarding teach to 5 minutes (facilitator summary only; skip pair reflection).
2. Reduce decision block by 10 minutes (assign one case in advance; groups start at 0:25).
3. Skip verbal debrief of transparency cards; collect one field per pair in chat.
4. One group presents charter headings; others submit worksheets asynchronously within 48 hours.
5. **Do not cut:** fictional-data rule, consultation reminder, transparency card exercise, or post-assessment announcement.

Follow-up clinic (60 minutes)

Run sheet: clinic/run-sheet.md

Minute-by-minute cues

Time	Cue
0:00	Welcome; de-identified questions only
0:05	Pulse poll
0:15	Q&A queue (3 to 5 pre-submitted questions)
0:45	Peer exchange
0:55	Close and evaluation

Expected participant responses

- Pulse poll: mix of “tried screening at work” and “blocked by no policy.”
- Q&A: practical questions about approval paths, not requests to review live casework.

Common misconceptions

Misconception	Response
“Clinic can troubleshoot my real dataset”	De-identified questions only. Redirect casework to org channels.
“No questions means we failed”	Use backup scenarios from run sheet.

Difficult questions

Apply the seven-step screen aloud with the group. If a question contains PII, pause and move to private channel with org contact.

Running long: cut list (clinic)

1. Limit Q&A to three questions.
2. Skip peer exchange; send written prompt after clinic.
3. **Do not cut:** opening rules on de-identification or safeguarding escalation.

15-minute source-check activity

Activity sheet: short-source-check/activity.md

Cues

Follow the activity run-of-show table (minutes 0 to 15). Pre-assign rooms before starting the clock.

Expected responses

- Pairs flag 08:00 vs 09:00, invented shuttle, missing live-notice check.

- Decision: **stop publication** pending verification with responsible authority.

Running long: cut list

1. Skip room comparisons; go straight from pair work to plenary poll.
2. Shorten one-line rule to optional async submission.
3. **Do not cut:** fictional-data warning or answer key reveal.

After the series

- Score performance scenarios and worksheets with the skills rubric.
- Complete the facilitator reflection log end-of-series synthesis.
- Schedule the 30-day transfer follow-up (one reminder only; anonymous option).
- Send hosting organization aggregate themes only (no individual ranking).
- Feed transfer summary into the sample final-report page.
- Remind participants that materials are CC BY 4.0; adaptation requires separate AAP process per design note.
