Curriculum overview

Curriculum overview

Audience

This curriculum is for staff of Canadian humanitarian and development organizations. Participants may work in program, operations, technical, or leadership roles. Some will be new to AI. Others will already use approved tools at work.

No paid AI account is required. No real beneficiary, staff, donor, or partner records are used in exercises.

Prerequisites

- Basic familiarity with your organization's data and communications policies
- Ability to join a 90-minute online or in-person session
- Optional: read the one-page AI use decision guide before Session 1

Learning pathway

Session	Level	Focus	Duration
Session 1	Level 1	Responsible AI foundations	90 minutes
Session 2	Level 2	Verified work by role	90 minutes
Session 3	Level 3	Governance and adoption	90 minutes
Follow-up clinic	All levels	Workplace application	60 minutes

Sessions are designed to be delivered once per month. Optional ten-minute practice between sessions uses only fictional or approved low-risk tasks.

Learning outcomes

By the end of the series, participants will be able to:

1. **Screen a task** using a seven-step risk screen and record a green, amber, or red decision with a named owner.
2. **Compare AI-supported drafts** to authorized sources and mark unsupported claims, contradictions, and harmful omissions.
3. **Improve a prompt** by naming the task, audience, permitted sources, output format, and a rule for missing facts.

4. **Protect data** by refusing to enter personal or sensitive operational information into unapproved tools.
5. **Name human control points** including who approves, can override, and provides remedy.
6. **Draft a bounded pilot charter** with a non-AI baseline, consultation requirements, success measures, and a safe exit.

Time plan

Week	Activity	Participant time
Before Session 1	Pre-assessment (optional)	10 minutes
Month 1	Session 1 + worksheet	90 minutes
Between 1 and 2	Optional practice screen	10 minutes
Month 2	Session 2 + worksheet	90 minutes
Between 2 and 3	Optional prompt improvement	10 minutes
Month 3	Session 3 + worksheet	90 minutes
Month 4	Follow-up clinic	60 minutes
End	Post-assessment (optional)	10 minutes

Canadian legal and accessibility context

This kit draws on the federal Directive on Automated Decision-Making and the OPC principles for generative AI. It has not been assessed against them. Organizations must also apply **PIPEDA** (and Quebec Law 25 where relevant), provincial privacy laws, and accessibility standards such as the **Accessible Canada Act** and **AODA** (Ontario) to their own materials and platforms. References point to primary sources; this kit is not legal advice.

Indigenous data sovereignty and partner-led governance are named in Session 3. Classroom exercises are not a substitute for nation-specific or community-led consultation.

Adapting for 15 to 40 participants

For skills assessment during case practice, facilitators should aim for **no more than 8 participants per breakout group** so each person can complete the worksheet. At 31 to 40 attendance, use parallel breakouts with co-facilitators or accept worksheet submission within 48 hours for rubric scoring.

Group sizing

Attendance	Suggested groups	Notes
15 to 20	3 to 4 groups of 4 to 5	Start in pairs within groups
21 to 30	4 to 5 groups of 5 to 6	Rotate reader,

Attendance	Suggested groups	Notes
		recorder, risk challenger, source checker
31 to 40	5 groups of 6 to 8	Use pairs for breakout tasks; plenary debrief; consider co-facilitator

Online delivery

- Share worksheets as editable files or no-login web forms before the session
- Use typed chat as an alternative to spoken breakout reports
- Enable captions; confirm who manages platform accessibility settings at inception
- Do not record breakouts or use AI meeting assistants on participant discussions

In-person delivery

- Provide printed worksheets for participants who prefer paper
- Post slide content on a shared drive at least five business days before each session
- Allow a no-camera equivalent: written participation routes online

Low-bandwidth adaptations

- Distribute case materials as plain text before the session
- **Synchronous:** phone dial-in plus typed chat; facilitator reads contributions aloud (see technology checklist)
- **Asynchronous fallback** when live join is impossible: worksheet within 48 hours and debrief window
- Offer a text-only participation route without breakout rooms
- See facilitation tips in each session folder for more detail

Materials included

Each session folder contains:

- Facilitator run sheet (minute by minute)
- Learning objectives
- Slide deck (markdown source, HTML, PDF)
- Speaker notes
- Facilitation tips
- Participant worksheet
- Answer key and debrief questions

Additional resources: eight synthetic case studies, pre/post assessment, skills rubric, evaluation form, decision guide, data-responsibility checklist, facilitator guide, participant handbook, and references.

Assessment approach

Performance scenarios scored with the four-point skills rubric are the **primary** pre/post measure. Five self-efficacy items are secondary. An optional 12-item knowledge check supplements reporting. See the assessment folder for scoring guidance and how to read small samples constructively.

Delivery and adaptation resources

- Facilitator delivery guide, preparation checklist, and sample invitation email
- Participant handbook and technology and accessibility checklist (captioning plan; synchronous phone-plus-chat low-bandwidth route)
- Visual aids with diagrams and text equivalents
- AAP adaptation design note for organizations adapting the kit (no claim of prior community consultation in this repository)
- Optional Session 2 live-tool lab for org-approved tools with synthetic data only

Evidence matrix

Requirement	How the kit addresses it	Primary sources
Responsible AI use	Seven-step screen; G/A/R decisions in every session	IASC 2023; UNESCO 2021; OPC 2023
Data responsibility	Checklist; protection and sharing cases	IASC 2023; OCHA 2025; ICRC Handbook 3rd ed.
Verification	Source-check tables; Session 2 prompt lab	OPC 2023 principles
Humanitarian protection	Protection lens; chatbot and SMS cases	Fundamental Principles; ICRC AI policy 2024
Governance and adoption	Pilot charter; vendor pitch case	Canada ADM directive; UNHCR AI approach
Canadian context	PIPEDA, AODA, ACA references	Government of Canada; OPC
